

PAS were awarded the contract to supply and install a site wide public address and class change system for a new primary and junior school located just several hundred metres from our offices. Partnering with one of the region's busiest electrical contractors, we supplied a discrete and effective communication system throughout the buildings to classrooms, circulation areas, halls and external areas. The system signals class change signals with pleasant electronic tones triggered by a programmable timer. Our engineers worked alongside the other contractors to deliver the system on time without any problems.

The school was one of three projects that PAS were working on for Morgan Sindall Construction in the North West in recent months. Our PA system solution enables staff the ability to make announcements to various areas of the school, signal class change times and play background music on special occasions.

A mixture of flush mounting ceiling, plus stylish wall loudspeakers were utilised internally throughout the building with weatherproof horn speakers covering the playground and external areas.

Client: Knowsley Council

Contractor: Morgan Sindall

M&E Contractor: A&B Engineering

Systems:
Public Address
Class Change
Induction Loops
